FOREWORD

There are growing concerns about the depletion of good grade ores and coals at a fast rate, and more so with the rapid industrial growth in the country. This coupled with the increased energy demand and more stringent environmental regulations have put a challenging task ahead of India to sustain its impressive growth rate and its aspirations towards a developed economy. Growth in the mining and mineral processing sector will be dictated by land, water, energy and environment. Research and development activities should focus on the utilization of low-grade and dumped ores and development of energy efficient and environmentally friendly processes. The coals used both for metallurgical industries and thermal power generation should be beneficiated for enhanced energy efficiency and minimization of waste. Technology has to be evolved for the processing of fine particles and development of zero-discharge processes. Besides, instrumentation and process control in the plants must be incorporated to ensure efficient operation as regards quality and productivity of mineral concentrates. This certainly requires a more innovative thinking and a strong sense of social responsibility. A concentrated and coordinated effort by the planners, plant personnel, engineers and researchers is required.

The National Metallurgical Laboratory (NML), Jamshedpur in collaboration with Tata Steel under the aegis of the Indian Institute of Mineral Engineers is jointly organizing the XI International Seminar on Mineral Processing Technology (MPT-2010) during 15–17 December, 2010 and also bringing out a pre-print volume containing all the technical papers accepted for presentation and publication. This seminar is also part of the Diamond Jubilee Anniversary celebrations of NML this year.

I hope, this volume will be of immense interest and find use as a reference book among the academicians, researchers and the mineral processing practitioners in near future.

(S. Srikanth)

30th November, 2010
Chairman, Organising Committee, MPT-2010 & Director, NML Jamshedpur
Minerals and mineral based products are an integral part of the economic and social fabric of modern society. Coal is equally essential in energy resources for the sustenance of life. Indian minerals industry has played an unassuming, yet indispensable role in facilitating the country's strong industrial growth. As a result, India is a leading global producer of a number of minerals and mineral based products. While India has performed fairly well in the field of mineral exploration and processing, it has ample scope in developing exploitation operations of its resources to optimal capacity.

Minerals are non-renewable resources, contributing significantly towards the expansion of the industries and economic growth of a nation. Depletion of high grade ores, generation of fines due to mechanized mining and enhanced environmental standards have posed serious challenges. The complexity of the problem is compounded by the fine nature of the assemblage of minerals. Additionally, today mineral industry is confronted with the challenge of increasing processing cost due to high costs of energy and manpower. Further, the global economic recession has adversely affected the mineral industry and the prices of mineral commodities. For the sustainable developments there is a need to address these challenges effectively. R&D efforts are being made worldwide towards developing innovative and eco-friendly technologies for the exploitation of mineral deposits with improved efficiency, lower energy investment and higher profitability.

Significant contributions in the field of technological development pertaining to mineral/coal processing have been made by NML, BARC, CIMFR, IBM in the past few decades. Organizations, like CMPDIL, IMMT Bhubaneswar, NEIST Jorhat and NIIST Thiruvananthapuram as well as R&D Divisions of corporate houses such as SAIL, TATA STEEL, NMDC, HZL, etc., also contributed immensely towards the technological development since they came into existence.

NML had developed several technologies to enrich the metallic values in minerals and ores through concentration. Dr. Shanti Swaroop Bhatanagar, in his address on inauguration of the Laboratory on 26th November, 1950 visualized that NML will come out with processes leading to the extraction of Fe, Ni, Cu, Zn, Sn, Co and Ti. True to his expectation research done in the field of iron and multi-metal sulphide ores beneficiation, nickel over burden, wolframite beneficiation, industrial minerals processing, coal preparation, etc., are noteworthy. The establishment and operation of bench scale and pilot plant scale beneficiation and agglomeration facilities in 1963, perhaps one of the oldest and largest in Asia, incidentally synchronizes with the establishment of public sector units in metals and mineral processing and coal washeries in India. NML Jamshedpur is celebrating its Diamond Jubilee this year. Jamshedpur is also known for its
first integrated steel plant established by Jamsetji Nusserwanji Tata more than 100 years ago.

In order to deliberate upon the above issues and keep abreast of the new developments, the XI International Seminar on Mineral Processing Technology (MPT-2010) is being organized at National Metallurgical Laboratory (NML), Jamshedpur, India during December 15–17, 2010. MPT-2010 is jointly organized at Jamshedpur by NML and Tata Steel as a part of the Diamond Jubilee Celebration of NML, under the aegis of Indian Institute of Mineral Engineers (IIME). Jamshedpur is located in the state of Jharkhand which is one of the richest states in mineral wealth in India and is considered to be the storehouse of mineral resources. MPT-2010 has provided a platform to mineral engineers, scientists, researchers, academicians and the plant operators for close interaction and exchange of ideas on different aspects of mineral processing and address the challenging problems faced by the mineral industry today. The present volume consists of papers under deliberation in MPT-2010 covering different aspects of mineral processing. The topics are grouped into fifteen sections namely: (1) Characterisation; (2) Comminution and Classification; (3) Gravity and Magnetic Separation; (4) Flotation, Flocculation and Surface Chemistry; (5) Modelling and Simulation; (6) Coal Processing; (7) Beneficiation of Iron Ores; (8) Processing of Strategic Minerals; (9) Processing of Industrial Minerals; (10) Agglomeration; (11) Hydro and Electro Processing; (12) Bio-processing; (13) Pyrometallurgical Processing; (14) Treatment of Waste and Environmental Issues; and (15) Allied Topics.

We are thankful to all the authors contributing papers towards the seminar. Thanks are due to all sponsors, exhibitors and advertisers for their support towards success of the seminar and publication of the volume. We are sure this volume will go a long way to serve the future researchers as a useful reference book.

CONTENTS

Foreword ................................................................................................................................. iii
Editorial ................................................................................................................................. v

VOLUME–I

SECTION–1

Characterisation

1. Optimal Liberation of Ore Minerals for Ore Beneficiation ................................................ 3
   B.K. Sahu

2. Characterization of Graphite Deposits of Arunachal Pradesh ......................................... 9
   Sarat Ch. Borah, Manash R. Das, Chandan Tamuly, Dipak Bordoloi and Pinaki Sengupta

3. Mineralogical Characterization and Sorption Properties of Goethite .............................. 16
   Rich Iron Ore from Daitari, Orissa, India
   R.K. Behera, K. Rout, B. Nayak and N.N. Das

4. Chemometric Analysis: A Tool to Predict the Release Behaviour ............................... 24
   of Hazardous Trace Elements (HTEs) during Coal Mining and Utilization
   Puja Khare, O.P. Sahu and B.P. Baruah

5. Characterisation of BOG Manganese Ore Associated with BIF in ............................... 31
   Iron Ore Group, North Orissa for its Optimum Utilization

6. Petrological and Geochemical Characteristics of the Granitoid Complex of ............ 39
   Astaneh, Western Iran, from the Point of Beneficiation
   Reza. Zarei Sahamieh, Amir Pazoki, Peiman Rezaei and Ali Saket

7. Study and Prediction of a Relationship between Particles Shape Characteristics ........ 43
   of Minerals and their Flotation Kinetics
   Mohammad Reza Aslani, Bahram Rezai and Atiye Eslamian

8. Analysis of Iron Ore by Axios-Advanced X-Ray Fluorescence Spectrometer ........... 47
   Using Potassium Pyro-Sulphate Fusion Technique
   B.N. Srivastava
9. Petrography of Beneficiated Heat Altered Coals from Damodar Valley ................................................. 51
   Mamta Sharma, Ashok K. Singh, Nandita Choudhury and K.K. Bhattacharya

10. Study of Mineralization in Gholgholeh Area Based on SEM and Fluid Inclusion (Southwest of Saghez city—Iran)
    Sayed Vahid Shahrokhi, Taher Farhadinejad and Reza Zarei Sahamieh ............................ 57

11. Nagaland Coals: Suitability as an Energy Source .................................................................................. 64
    B.P. Baruah, Puja Khare, D.K. Dutta and N.N. Dutta

12. Petrographic Studies of Nagaland Coals ......................................................................................... 69
    Niharika Saikia, Puja Khare, M.N. Dutta and B.P. Baruah

13. State of Art Characterization Study of Banded Hematite Jasper for the Purpose of Beneficiation
    S.N. Gurulaxmi, T.K. Ghosh and A.K. Mukherjee .......................... 75

14. Implication of Process Mineralogy for Beneficiation of Low Grade Iron Ore Resources Containing High Alumina from Eastern Part of India
    Vinod Kumar, G.N. JadHAV, N.K. Khosla, S.P. Mehrotra, M.K. Mohanta and K.K. Bhattacharyya
    .................................................................................................................. 82

15. Uncertainty of Measurement for Determination of Major Elements in Iron Ore Using ICP-OES
    ......................................................... 92

SECTION–2

Comminution and Classification

16. The Effect of Different Parameters on the Power Draw of Miduk Copper Concentrator SAG Mill
    A. Kamali Moaveni, M. Noaparast and B. Rezai ......................................................................... 101

17. Study of Progeny Particle Size Distribution in an Impact Hammer Mill
    Sujit Kumar Dey, Vidyadhar Ari and Avimanyu Das ................................. 107

18. Increasing Crushing Circuit Efficiency
    Aman Kumar ......................................................................................................................... 114

19. Application of New Type Pre-Classification Hydrocyclone with Centrifugal Volute in Grinding Process
    Peikun Liu, Xueqi Cui and Xiaopeng Wang ............................................................................. 120

20. Effect of Air Core on Flow Rate and Split in a Hydrocyclone
    Anshul Goyal, Papiya Roy and P.K. Banerjee ........................................................................... 124

21. Crushing Solutions for ROM Sizing
    Martin Wetter and Ketan Bandopadhyay .................................................................................. 132
SECTION–3

Gravity and Magnetic Separation

22. Development of Simple Process Flowsheet for a Silica Sand Sample to Produce High Grade Silica Sand Concentrate from Ratnagiri District, Maharashtra
   V.A. Sontakkey, M.S. Rao and Mohan Ram
   139

23. Ultra Fine Chromite Concentration Using Spiral Concentrator
   Sunil Kumar Tripathy, Y. Ramamurthy, G.P. Sahu and V. Tathavadkar
   144

24. Enhanced Zircon Recovery through Centrifugal Jigging
   151

25. New Prospective for the Utilisation of Indian Lateritic Chromite Overburden
   Y. Rama Murthy, B. Chenna Rao, Gajanan Kapure and Vilas Tathavadkar
   158

26. Wet High Intensity Magnetic Separation: Efforts Taken to Adapt the Machine to the Mineral Separation Plant of IREL, Chavara
   166

27. High Intensity Magnetic Separation of Iron Ore Slime and its Limitations
   Sunati Mohanty, B. Nayak and K.K. Bhattacharyya
   173

28. Beneficiation Response of a Low Grade Iron Ore from Eastern India for the Production of Sinter and Pellet Feed
   179

29. Development of Combined Technology for Rebellious Metamorphized Polymetallic Ores
   B.K. Kenzhaliev, S.S. Lozhnikov, V.A. Chanturiya, U.K. Zhapbasbaev and E.N. Suleimenov
   186

30. Process Development for Recovery of Chromite Values from COB Plant Tailing Samples Collected from Various Operating Plants in Sukinda
   M.S. Rao, Mohan Ram and C.S. Gundewar
   192

31. Influence of Shaking Table Process Parameters on Concentration of Chromite Plant Tailings
   Sunil Kumar Tripathy, Y. Ramamurthy, G.P. Sahu, L. Panda, V. Singh and V. Tathavadkar
   199

SECTION–4

Flotation, Flocculation and Surface Chemistry

32. Recovery from Complex Ore by Floatation
   Güven Önal, Neşet Acarkan, Gülay Bulut and Alim Gül
   207

33. Enhancing Chalcopyrite Flotation by Tackling Hydrophobic Silicate Gangue
   V.A.J. Aruna, S.N. Goswami, P.R. Bawane, Mohan Ram and C.S. Gundewar
   216
34. Study of Liquid Phase Mixing Characteristics in Flotation Column ........................................ 223
   S. Shukla, K. Bhunia, G. Kundu and D. Mukherjee

35. Relationship between Surface Roughness of Minerals and their Flotation Kinetics .................... 232
   B. Rezai, M. Rahimi, M.R. Aslani, A. Eslamian and F. Dehghani

36. Separation of Iron Bearing Minerals from Slime by Flotation ..................................... 239
   Shivesh Kumar, R.K. Rath, R. Singh and Anil Kumar

37. Recovering Iron Values from Iron Ore Slimes Using Cationic and Anionic Collectors ............ 247
   John Samuel Thella, Asim Kumar Mukherjee and Y. Rajshekar

38. Development of New Modifying Reagent-Assisted Technology for Rebellious Gold-Bearing Ores Processing .................................................. 255

39. Flocculation Studies on Non-Coking Coal Fines Using Suitable Reagents ..................... 259
   K.M.P. Singh, G. Udayabhanu, T. Gouri Charan and D.D. Haldar

40. Characterisation and Surface Chemical Studies on Ultrafine Iron Ore .......................... 265
   A.K. Kar, R.K. Rath, M.K. Mohanta, R. Singh and Anil Kumar

41. Characterization and Ion Specificity of the Iron Ore Beneficiation Waste ..................... 273
   Manash R. Das, Jyotirmoy Sarma, Namrata Sarma and Sekh Mahiuddin

42. Flocculation and Filtration Studies on Uranium Ore Slurry Using Some Commercial Flocculating Agents ................................................. 280

   T.V. Vijaya Kumar, S. Subba Rao, G. Bhaskar Raju, S. Prabhakar, S. Shivakumar and Uma Raman

44. Adaptation of Efficient Thickeing Technology in the Circuit for Economical Recovery of Gold at Hutti Gold Mine .......................................... 295
   M. Shankargouda, Suresh Eligar, Gurubasayya Swamy and T.J. Sri Raghava

45. Development of a Fast and Accurate Method for Testing of Nigrosine .......................... 300
   S.C. Bhanawat, V.V. Ramarao and U. Vishwanath

46. Influence of Flocculant Overdosing on Solid/Liquid Separation Properties ....................... 308
   L. Besra, D.K. Sengupta and S.K. Roy

47. Column Flotation Technology—NML Experience .................................................. 317
   S. Prabhakar, G. Bhaskar Raju, S. Subba Rao and T.V. Vijaya Kumar

   T. Umadevi, S. Prakash Rao, Pankaj Roy, P.C. Mahapatra, M. Prabhu and Madhu Ranjan

106. Characterization Of Sinter Return Fines
   Amishi Bharti, Gautam Kumar, Moni Sinha and D.S. Chakraborty

107. Effect of Burnt Lime Addition on Sintering of Iron Ore Fines
   Abhishek Sharma and Nandani Rai

108. Effect of Process Variables on Sintering Indices In Relation to High LOI Hematite Ore Fines of Gua Mines
   Debarun Chakraborty, M.C. Goswami and Ram Pravesh Bhagat

SECTION–11

Hydro and Electro Processing

109. Energy Saving During Alum Production from Kaolin with Coproduction of Alumina-Silica Composities from Process Silica Wastes
   A.K. Ismail

110. Kinetics of Chromium Extraction as Sodium Chromate from Stainless Steel Dust
   Sanjay Prasad

111. Recovery of Lead, Silver and Manganese from Anode Mud Generated at Zinc Smelter Debari (Udaipur)
   S.C. Parkih, Anil Purohit, Vijay Verma, L.K. Agarwal and Ashish K. Singh

112. Recovery of Valuable Metals from Sea Nodules through Reduction-Roasting Ammonia Leaching Process
113. Acid Pressure Dissolution of Matte Produced from the Alloy Obtained from Direct Smelting of Sea Nodules
   Animesh Roy, R.R. Srivastava, K. Smita, D. Mishra, A. Agrawal, J. Hait and K.K. Sahu
   ........................................................................................................... 810

114. Silicomanganese Production from Manganese Nodules Leach Residue by Blending with Manganese Ore
   N.S. Randhawa, D. Mishra, K. Smita, J. Konar and R.K. Jana
   ........................................................................................................... 817

115. Extractive Separation and Recovery of Hydrochloric Acid and Iron Values from Spent Pickle Liquor
   Manish K. Sinha, S.K. Sahu, Pratima Meshram, B.D. Pandey and V. Kumar
   ........................................................................................................... 824

116. Desilication Studies of Diasporic Bauxite by Thermochemical Treatment
   M. Moazemi and B. Rezai
   ........................................................................................................... 832

117. Leaching Kinetics for Iron from Partially Laterised Khondalite Rocks by Hydrochloric Acid Solution
   Ranjita Swain and R. Bhuima Rao
   ........................................................................................................... 839

118. Study and Development of Advanced Technology for Silver Sorption Recovery from Multicomponent Leaching Solutions
   I.K. Beisembetov, B.K. Kenzhaliyev, N.A. Zakharova and Z.D. Dosymbaeva
   ........................................................................................................... 848

119. Study of Gold and Silver Leaching Processes from Sulfide Ores
   N.A. Zakharova, Z.D. Dosymbaeva, A.K. Koizhjanova, E.N. Suleimenov and G.Z. Beisembayeva
   ........................................................................................................... 854

120. Extraction of Gold from Heap Cyanic Solutions of Polymetallic Ores by Polycondensational Anionites
   ........................................................................................................... 859

121. A Study of Separation of Iron Powder and Preparation of Ti-Al Alloy by Selective Electrolysis of Ilmenite
   ........................................................................................................... 866

122. Aqueous Alkaline Processing of Chromite Mine Overburden
   S. Acharya, M.S. Jena and J.K. Mohanty
   ........................................................................................................... 874

123. Leaching Studies for the Recovery of Tin from the Solder of Waste Printed Circuit Boards
   Pankaj K. Choubey, Manis K. Jha, Vinay Kumar, Jinki Jeong and Jae-Chun Lee
   ........................................................................................................... 884

124. Recovery of Lead from the Solder of Waste Printed Circuit Boards
   Archana Kumari, Manis Kumar Jha, Vinay Kumar, Jinki Jeong and Jae-Chun Lee
   ........................................................................................................... 891

125. Physicochemical Changes during Mechanical Activation of Boehmite
   T.C. Alex, Rakesh Kumar, Ansu J. Kailath, S.K. Roy and S.P. Mehrotra
   ........................................................................................................... 898

126. Solvent Extraction: A Potential Tool for the Separation of Metals from Leach Liquor of Electronic Scraps
   Abhishek Kumar, Manis Kumar Jha, Vinay Kumar, Jinki Jeong and Jae-Chun Lee
   ........................................................................................................... 905
SECTION–12

Bio-processing

127. Biotechnological Innovations in Iron Ore Beneficiation .................................................. 915
   K.A. Natarajan

128. Revisiting Sulphide Mineral Flotation: A few Priorities .................................................. 923
   and Directions
   K. Hanumantha Rao

129. Studies on Acid Production Potential of Mine Tailings and Bioremediation .................. 933
   of Acid Mine Water from an Abandoned Indian Copper Mine
   S. Subramanian, Evvie Chockalingam and J.J. Braun

130. Leaching of Nickel Laterite Using Fungus Mediated Organic Acid ............................ 946
   and Synthetic Organic Acid: A Comparative Study
   S.K. Behera, L.B. Sukla and B.K. Mishra

131. Effect of Thermal Activation on Recovery of Copper Using ......................................... 955
   Microorganisms from Ball Mill Spillage
   S. Panda, S.K. Panda, B.D. Nayak, D.S. Rao, N. Pradhan,
   L.B. Sukla and B.K. Mishra

132. Reductive Leaching of Valuable Metals from Indian Ocean Nodules .................... 962
   by Bacillus Circulans
   K.D. Mehta, Chitrangada Das and B.D. Pandey

133. Kinetics and Mechanism of Uranium Bioleaching from a Low .................................. 969
   Grade Indian Ore
   Abhilash, B.D. Pandey and L. Ray

134. Bio-Desulphurization of Makum (Assam) Coal .......................................................... 976
   K.K. Rajak, B.K. Yadav, R.B. Mandal, V.K. Saxena
   and N.R. Mandre

135. Redox Processes in Sulfide Minerals Biochemical .................................................... 981
   Solutions Reactions
   E.I. Ponomaryova and A.K. Koizhanova

   with Intensifying Additives
   B.K. Kenzhaliev, A.N. Berkinbayeva, G.Zh. Beisembaeva,
   B. Asilbekov and E.N. Suleimenov

137. Effects of Microorganisms and their Metabolites on Nonferrous .............................. 994
   and Precious Metal Ores Leaching
   B.K. Kenzhaliev, A.N. Berkinbayeva and T.A. Khodaryova

   from Chalcopyrite: A FTIR Study
   M.N. Chandraprabha and K.A. Natarajan

139. Kinetic Aspects of Cr(VI) Bioremediation of Water and Soil Contaminated ............. 1007
   from Chromite Mine Overburden Dumps
   B. Dhal, N.N. Das, H.N. Thatoi and B.D. Pandey
SECTION–13

Pyro-metallurgical Processing

140. Phase Transformation of Friable Chromite Ore during Heating in the Inert Atmosphere .................................................. 1017
Ranjit Prasad and Akhilesh Chaudhary

141. An Experimental and Thermodynamic Study on Reduction Smelting of Sea Nodules to Recover Valuable Metals .......................................................... 1024

142. Removal of Manganese and Iron from the Alloy Obtained from Direct Smelting of Sea Nodules .......................................................... 1032

143. Production of SG Grade Pig Iron by Optimising Slag Chemistry in Mini Blast Furnace .......................................................... 1039
M.M. Mahato, M.K. Agrawal and S.N. Sinha

144. Melted Slag and Electric Current .................................................................................................................................................. 1046
E.N. Suleimenov and M.M. Mahato

145. Changes in Melted Slag Structure with their Temperature Change .......................................................................................... 1056
E.N. Suleimenov and M.M. Mahato

146. Magnetite Ore of Nagaland—Its Mineralogy and Reduction Kinetics .......................................................................................... 1064
A.K. Vaish, B. Nayak, M.C. Goswami, S.D. Singh, D.P. Singh and R.C. Gupta

SECTION–14

Treatment of Waste and Environmental Issues

147. Solid Waste Processing for Industrial Utilization—A few Case Studies .................................................................................. 1075
R. Venugopal

148. Effective Management of Coke Oven Solid Waste and By-Products in Steel Plant ............................................................................. 1084
Anil Barik

149. Molecular Approach for Phytoremediation and Phytomining of Metal-Contaminated Sites .................................................. 1094
Ranjit Prasad and Swati Shallika

150. Utilisation of Geosynthetic Liner for Prevention of Ground Water Contamination due to Coal Ash Disposal in Abandoned Open Cast Mines ............................................................................. 1102
Babuly Prasad, Kumari Sangeeta and B.K. Tewary

151. Ground Water Recharge Potential of the Tasra Block of Chasnala—A Case Study ............................................................................. 1111
G. Kumar, S.K. Singh, B.K. Sinha and Bikas Prasad

152. Emission of Fine Particulates and SO2 during Coke Making— A Pilot Plant Study ............................................................................. 1120
Lione Goswami, Puja Khare and B.P. Baruah
   K.K. Singh, T.R. Mankhand and S.N. Sinha

154. Environmental Management in Beach Sand Mining and Processing—A Role Model .................................. 1129
   P.F. Joseph, V.G.K. Prasad, A.J. Janarthanan and V. Chandrasekar

155. Wet and Dry Deposition of Atmospheric Pollutants around Coal Mining Area of Dhanbad and Bokaro Districts .......................................................... 1137
   G.C. Mondal, Abhay Kumar Singh, T.B. Singh, B.K. Tewary and A. Sinha

156. Impact of Iron Ore Mines Generated Pollutants on Peripheral Environment and its Effective Management—A Case Study of Koira Region, Odisha .......................... 1147
   S.R. Panda and Anil Barik

157. Study on Arsenic Removal Capacity of Iron Oxide Pillared Montmorillonite Clay from Ground Water .......... 1157
   T. Mishra, S. Pal, J.N. Patel and S. Bhattacharjee

158. Management of Acid Mine Drainage (AMD) in Indian Coal Mines ......................................................... 1163
   B.P. Baruah, Puja Khare and P.G. Rao

159. Tailored Clays for Acid and Effluent Treatment .......................................................................................... 1171
   J.N. Pansare, Roopali Samant, M.M. Kulkarni, P.K. Pandey and T.V. Mani

160. Treatment of Arsenic-Containing Acid Mine Drainage by Micro-bubble Flotation .................................. 1175
   G. Dodbiba, D. Dai, K. Okaya, S. Matsuo and T. Fujita

161. Clean Coal Technology—A Technical Response to the Environmental Challenges ............................ 1181
   Kumari Anjali and Rajesh Kumar Pandey

162. Recovery of Copper From PCB Leach Solution by Solvent Extraction .................................................... 1189
   A. Agrawal, M. Perween, Shubhajit Pramanik and K.K. Sahu

163. Recovery of Metal Values from Spent Nickel-Cadmium Rechargeable Batteries by Solvent Extraction Route .......... 1195
   Archana Agrawal, Pankaj Pathak, D. Mishra and K.K. Sahu

164. Immobilization of Cr (VI) in Ferrochrome Flue Dust .................................................................................. 1202

165. Water Management at Vedanta Aluminium Ltd., Lanjigarh Refinery ...................................................... 1209
   Bimalananda Senapati, C. Satish Kumar and Tonmoy Banerjee

166. Environmental Impact of Coal-Carbonization and its Bioremediation ..................................................... 1216
   P.K. Mishra, I.M. Asadullah and H.S. Lal
