Performance Targets Achieved in 2020 - 2021

	Objectives	Planned	Achieved
1.	Total External Cash Flow (ECF)*	32 Crores	22.06 Crores
A.	Grant-in-Aid		1.99 Crores
2.	Industrial ECF (a part of ECF)	24 Crores	20.08 Crores
	a. Foreign Sponsored		0.1 Crore
	b. Public Sector Units (PSUs)		14.83 Crores
	c. Private Industries including Testing		5.15 Crores
3.	Customer Satisfaction Index	4.8	4.8
4.	SCI Publications (no.)	130	124
5.	Patents (no.)	25	20
6.	Copyrights (no.)	5	1
7.	Technologies Developed# (no.)	5	8
8.	Technologies Transferred* (no.)	5	3

^{*}Cash flow generated from sponsored projects of industrial, PSU and government agencies.

#Technologies Developed:

- Zincometer: A sensing device for real-time Zinc weight measurement in galvanized wire lines
- Indigenous Sodium metal production technology
- 3. Technology for beneficiation of low-grade Limestone containing finely disseminated Silica grains for utilization in the cement making industry
- Energy-efficient production of low/medium Carbon Ferromanganese
- Conversion of Hematite fines to Magnetite using Compressed Natural Gas (CNG)
- Technology for production of Tungsten metal powder from plant tailings or waste sample
- 7. Low cost work hardenable Hadfield steel for heavy impact gouging wear-resistant application
- Know-how for preparation of hydrogen standard (CRM) in steel

*Technologies Transferred:

- Transfer of Know-How (Lab scale) for extraction of valuable and precious metals (Cu, Au, Ag & Co, Mn) from scrap of electronic waste & waste Li-Cobalt Batteries (Walle Infotech, Ranchi)
- 2. Transfer of Know-How for extraction of cobalt metal/salt from Black Powder of Lithium Batteries (UNQ IND PVT. LTD. Firozabad)
- Transfer of technological KNOW-HOW for the extraction of Cu, Al and Au from waste PCBs (KNOW HOW) (Metaore Recycler Pvt Ltd)

Major Administrative & Business Targets Planned and Achieved in 2020-2021

Major Administrative & Business Targets Planned	Major Administrative & Business Achieved
 Recruitments: Gr (IV) scientists: 10 nos. Gr III, Gr II: 15 nos. Training & development of higher and advanced skills of scientists/employees Workshop & conference: 30 scientists and 10 employees In-house: 15 employees Through HRDC: 10 employees 	 Formalities for advertising recruitment of Scientists has been completed Finalization of Gr.III/II requirement is in the progress Advertisement for recruitment of Security Officer has been made. 27 Scientist/Technical staff attended Conferences/ Seminars/Workshops 12 persons attended skill development/ capacity building programme

Major Technological & Scientific Targets Planned and Achieved in 2020-2021

Major Technological & Scientific Targets Planned	Major Technological & Scientific Targets Achieved	
 Development of coatings to control the corrosion behavior of Mg-alloys in simulated body fluid for application as degradable bioimplants Technology for on-board spacecraft life detection for ISRO Sensor & device for damage assessment of components exposed to high temperature Development of biodegradable alloys for orthopedic implants Development of process for MAX phase synthesis for large application of metal carbides/ nitrides based 2D materials 	 Proof of concept established, process being optimized Device fabrication is in-progress. Expected to be delivered for testing by May 2021. Eddy current Sensor susceptible to 750°C has been designed and characterized Mg and Zn based alloys are developed with required mechanical strength. However, degradation rate needs to be controlled. Process for layered Ti₃AlC₂ is established with phase purity of 80%. Efforts are on to improve the purity of the desired material 	
Holistic utilization of red mud Li extraction technology from end-of-life batteries on 1 kg scale.	 The detailed project proposal has been finalized and agreed by all six partners. MoU between all parties has been signed. The project on Li extraction from end of the life batteries has been started and is progressing well. The technology at 1kg scale will be established. 	
 Q&P processed steel for higher Ms Material data base for Fatigue crack propagation characteristics of Ti-6Al-4V under cyclic loading 	 Technical part of the project is cleared; some terms and conditions are being worked out. The project approval letter is expected in first quarter of 2021-22. 	

Major Technological & Scientific Targets Planned Major Technological & Scientific Targets Achieved Advanced Gravity Concentration of Chromite Concentrate with an assay of 40% Cr,O₃ was Beneficiation Plant Tailings produced and around 32% of chromite was recovered Identifying the Enablers to Reduce K,O and SiO, in Dolomite Samples characterization Detailed studies completed for all the three dolomite samples. Studies on Beneficiation of Low-grade Developed a froth flotation studies for Manganese ore Samples the reduction of K₂O and silica contents in concentrate to desired levels. Beneficiation involving gravity, magnetic and reduction-roasting was carried out. Process route for upgradation of low-grade manganese ore for application in production of ferromanganese was developed. Analysis of 10,000 refereed sample and 5000 Analyzed almost 15000 refereed samples and 5000 band by band coal core samples core coal sample Determination of trace and rare earth elements Not achieved, Samples not received in Indian soil and sediment samples (3000 no) Coal sampling work at Rajrappa, Kedla, Kathara and Swang are continuing effectively Coal sampling, preparation and quality assessment of CCL coal washeries 5 new CRMs have been developed which 3 new CRMs of Brass, Alloy cast iron and H, pin includes Coal, H. Standards, Ferroalloys and standards Alloy cast iron Development of Ceramic Coating and Self Developed technology to impart corrosion resistance to brass ammunitions healing coating Installation and Commissioning of 200 tones Erection and dry run completed. Commissioning per day flotation column for fine coal flotation with coal slurry is pending. Delayed due to at Belatinda Coal Preparation Plant Covid-related restrictions. Will be completed in 2021-22. Industry (plant) scale trials (5 tones per hour) of newly developed environment friendly flotation Reagent in bulk is ready. However, trials at reagents for sillimanite at M/s Kerala Minerals commercial plant scale operations at M/s and Metals Ltd., Kerala Kerala Minerals and Metals Ltd., Kerala were delayed due to Covid-related restrictions. Will Pilot plant scale trials (1 ton per hour) of newly be completed in 2021-22 developed environment friendly flotation reagents for limestone beneficiation at M/s Completed Vedam Calcimin Pvt. Ltd., Telangana
